ABR Systems Private Limited

Tiruchirapalli

Brief Company Profile

ABR Systems is a fast growing information technology and telecommunication company, actively involved in various infrastructure projects. Over the years, ABR Systems has earned a reputation of providing quality services to meet requirements of major corporate.

ABR Systems is a professionally managed group, established in the year 2003. With close to 10 years of association in the Information Technology and Services industry, ABR Systems is well known for its products and quality services in Information Technology and Telecommunication industry. We believe "Quality is our Growth"

Our mission is to design, supply, install and support innovative products that deliver maximum customer satisfaction. Quality is our growth. It is our belief that when we achieve quality in everything we do, we shall accomplish our mission

This has been augmented by taking special care in bringing the right resources with appropriate skills for required projects. Today ABR Systems has reached critical mass, from where it is ideally suited to provide quality service in major areas of electromechanical, telecom & information technology.

Additionally ABR Systems has access to a larger pool of resources through a flexible hiring policy. Today we can boast of an impressive customer list and a series of successfully implemented projects. We offer services in all the areas of Information Technology and Telecommunication, starting from conceptualization and design to development, deployment, training and support operations.

Some of the projects we have successfully implemented are as follows:

> **ABR Smartrack** is GPS enabled Mobile Phone Tracking application. This application uses satellite and GPS technology to provide vehicle and staff member's exact location on real time. The web application used the mobiles location or the vehicle's location and provides other status reports like battery-level indication, panic messages and a host of other features. Available in the Android Marketplace and the Nokia OVI store.

ABR Locator is developed for the organizations who want to track their employee's current location through a SMS and not a regular web application.. The added feature of this application is Mobile Finder this will make Call and send SMS to base number when phone SIM card changed. This application is available on the Nokia OVI Store for Symbian S60 3rd Edition phones.

ABR Call Log is a mobile application which tracks the incoming, outgoing, and not answered calls and send the details about the call such as time of call, duration of call, remote party number through GPRS to the Mobile Call Log server. Administrator can view the call details from the web application. This application is available on the Nokia OVI Store for Symbian S60 3rd Edition phones.

ABR Remote MobiCam takes photo using mobile phone camera and sends photo to the server at the interval of 120 seconds. Administrators can see the photos remotely on the web application. This application is available on the Nokia OVI Store for Symbian S60 3rd Edition phones.

Real time Mobile Inventory is a mobile application for the FMCG industry catering to the mobile sales force. This application which will help you to manage inventory and sales in an easy, efficient way by providing a complete, wireless inventory management system that is synced up every day with the master server. Helps the sales person to record orders by other retailers during store visits and saves time and money in data transfer. Also provides functionality to search items by name, stores by location or suppliers. Available for Android and Nokia s40 and s60 phones.

ABR Bulk Sms is an application to send Sms (Short Message Service) to a single person or a group. Contact details can be imported using an excel spreadsheet. The Sms credits can also be assigned to different departments - with login for each department. It is also possible to view the sms sent history details.

Student Management System is a student attendance tracking system. Track students attendance by means of barcode generated uniquely for each student and affixed on the identity cards. Help identifies student behaviour with respect to class attendance. This application has been implemented for schools in the Middle East.
