## 4) Rate Management:

You can add rate package for maintaining bills such as monthly bill. You can know how much you spent for each mobile for each month.

ABR Call Log is a mobile application, this application tracks the Incoming, Outgoing, Missed and No answered calls and send the details about the call such as Time of call, Duration of Call, Remote party number through GPRS to the Mobile Call Log server.

This application starts up while mobile start up, so no need to start it every time mobile start up, just enable Auto Start option in the application settings. This application runs on background, so it will not affect you normal activity.

If GPRS disabled on the SIM, It stores the call log details in the application database and send to the server whenever GPRS gets activated, so no need to worry about your loss of call log details.

The default login details for ABR Call Log mobile application is

Username: admin  
Password: admin

## Settings

ABR Call Log application has the following settings parameter; User can change these settings as they need

- 1) Base Number – This mobile number, this number has all the controls over the application. Settings of the application can be changed through SMS from this number. Automatic Call and SMS will send to this mobile number when SIM card is changed on the mobile.
- 2) Base Number -1 – This mobile will receive two caution SIM change notification SMS when SIM card is changed on the mobile.
- 3) SIM change msg. – This is customized SIM Change caution message, this message will send to Base number and Base Number -1 when SIM card changed.
- 4) Call Log URL – This is the Server URL allocated to you, when server changed user will be asked to change this value.
- 5) Username – This is the username, user can change this value after first time login
- 6) Password – This is password, user can change this value after first time login
- 7) Store File Size – This is the size allocated on you mobile for storing call log details if GPRS inactive.
- 8) Auto Start – To start the application at mobile start up time, enable this option.
- 9) Low Battery Alert – If this option is enabled, it will send a message to base number when mobile battery level comes below 25% and 20 %.
- 10) Start & Stop Alert – If this option is enabled, it will send a message to Base number when application start and stop.

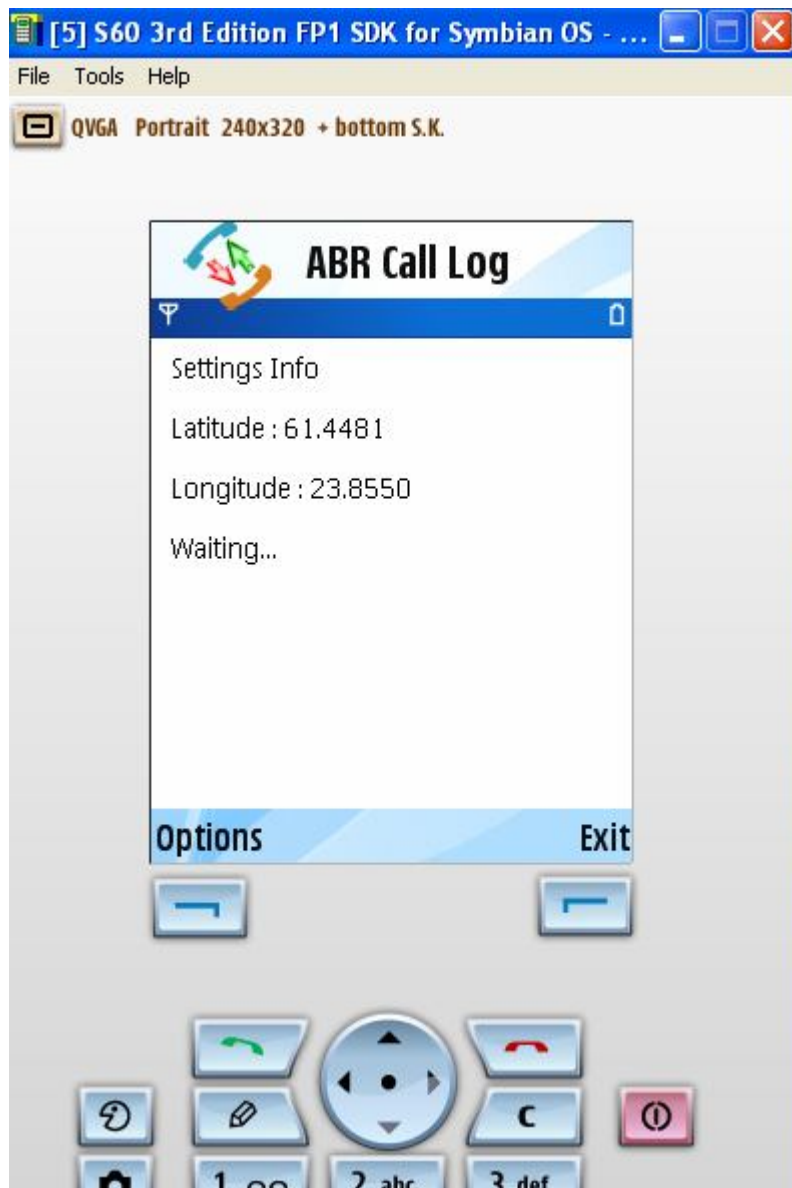

Base number can change the above settings via SMS.
