

Smart Order Booking

Introduction.

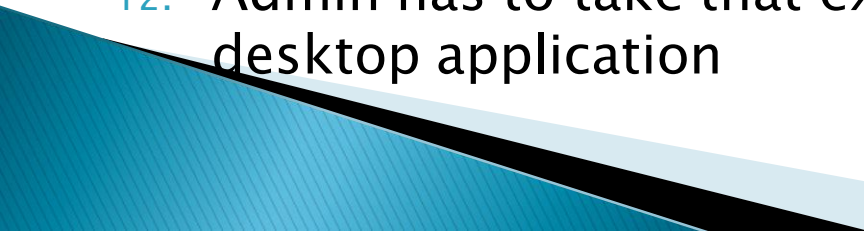

- ▶ This is android application for mobile for Order booking. Sales person enter his order into this smart phone instead of entering to a paper. This reduces the paper work.

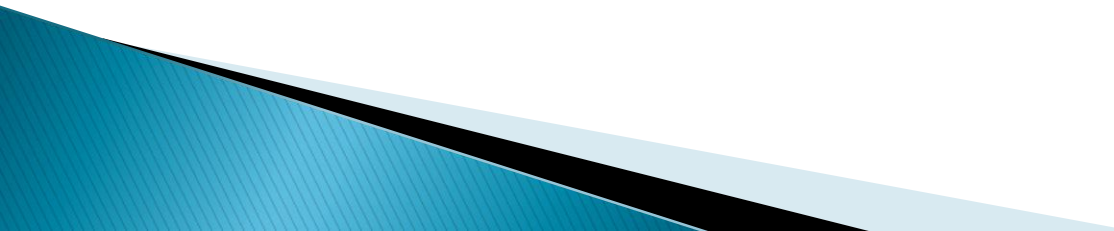

Application Functionality

Smart Order booking software helps the sales person to quickly list out the dealers list, product list and makes order entry easier and faster. Below explained the step by step function of the application

1. First Admin has to get Excel format of the database tables from their Desktop application.
2. Put those Excel files to the SD card folder in the Android mobile.
3. Now the application will extract data from those Excel sheet.
4. Sales person has to select his area from the list of areas display. Then it will display only customers of the area only.
5. Sales person has to select Company name then it will only display products of the company
6. The columns displays are Item, MRP, Selling Price, Stocked, and Booked

7. To book an item user has to just touch that item to enter number of quantity.
 8. Like in step 7 users can book the item for further items.
 9. After booking all the items to a customer, he has to click Finish.
 10. To synchronize data from Mobile application to desktop application, the admin has to click Sync button in the application.
 11. After that connect the Mobile to System using USB cable, it will open a folder, there is booked excel file.
 12. Admin has to take that excel file and sync that with his desktop application
